

# **APPLICATION MANUAL**

Universal Explosionproof
Two-Compartments Instrument Housing Type:
XD-ID100, XD-ID100win, XD-ID100H, XD-ID100Hwin

#### Contents:

- 1. Destination.
- 2. Flameproof joints, process opening, conduit openings.
- 3. Carried out tests for non transmission of an internal ignition.
- 4. Earth and protection terminals.
- 5. Protection degree.
- 6. Way of mounting.
- 7. Marking.

#### **NOTES OF SAFETY**

The XD-ID100, XD-ID100H, XD-ID100win and XD-XD100Hwin are designed to accommodate various electronic instruments. If used incorectly it is possible that application-related dangers may arise.

The XD-ID100... uniwersal instrument housing may be used by qualified and authorized company and people only, under strict observance of these application manual and relevant standards, legal requirements, and, where appropriate the certificate.

Only the empty XD-ID100... instrument housing is certified. When used as part of an end product assembly, subsequent Approval by FM Approvals or CSA of the end use equipment assembly is required.

#### 1. DESTINATION.

## 2. FLAMEPROOF JOINTS.

Flameproof joints are designed for gas group A (Div), volume  $500 < V \le 2000 \text{ cm}^3 \text{ group II C}$  (Zone) enclosures.

| 5   | Cilindrical joint<br>Ø22H8                       |                                        | NOT tested as a flame                            | reproof joint.                     |                                                             |                                    |       |

NPT threads are modified to reach 5÷5,5 engaged threads and can create flameproof joint with threaded male part with standard cuting tolerance.

# Only NPT threads can be used for CSA Division, in all openings.

**Process opening** can be used for mounting sensor (e.g. level, flow sensor) or thermowell.

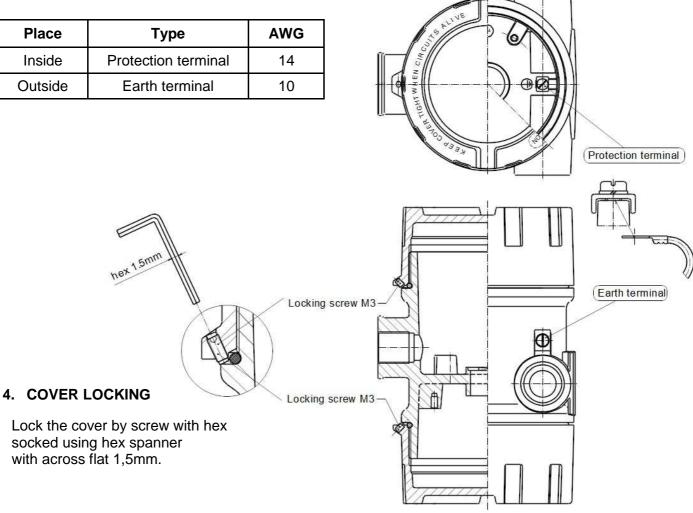

**Conduit openings** can be used to equip it with certificated explosionproof / flameproof cable glands, fill sealing fittings, flexible couplings or thermowells.

Each  $D_1$ ,  $D_2$  and  $D_3$  opening can be **plugged**.

### 3. EARTH AND PROTECTION TERMINALS.

| Place   | Туре                | AWG |  |
|---------|---------------------|-----|--|
| Inside  | Protection terminal | 14  |  |
| Outside | Earth terminal      | 10  |  |

# 5. PROTECTION AGAINST WATER AND DUST INGRESS, (Enclosure type 4x)

There are three connections of assembled device deciding about water and dust tightness:

- 1 cover
- 2 process opening
- **3** conduit openings.

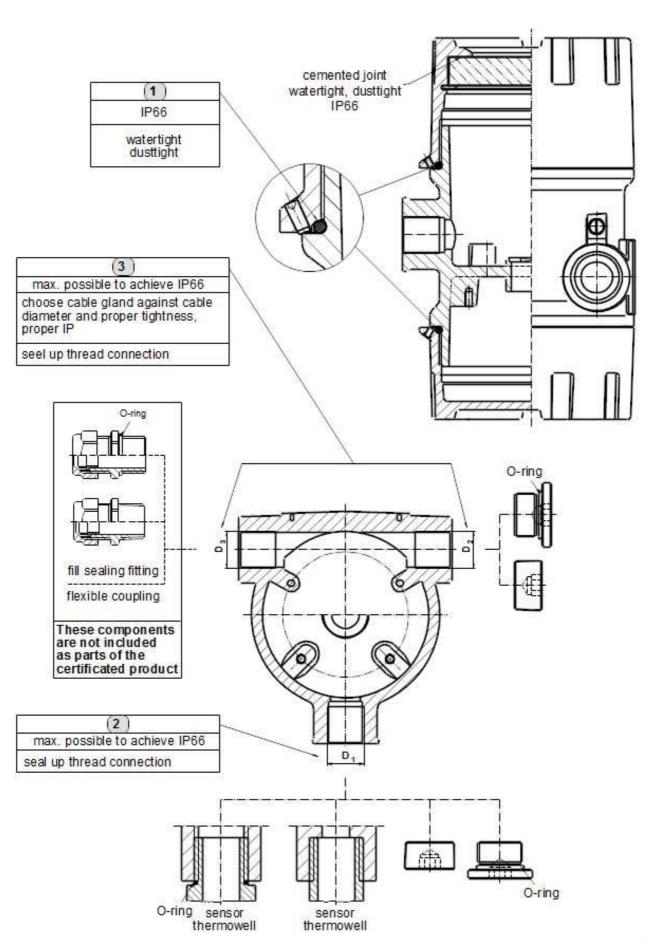

| Threaded connection sealing                      | Protection against water and dust ingress | Possible IP |
|--------------------------------------------------|-------------------------------------------|-------------|
| Without sealing - standard accuracy class thread | NO                                        | IP54        |
| Use of a sealant, e.g. Loctite 577               | YES                                       | IP66        |
| Thread tightened with O-ring                     | YES                                       | IP66        |

### ! ATTENTION!

It is required min IP65 protection for instruments designed for dust zones.

(Besides zone 22, non-conductive dust, where min IP54 protection is required)

### 6. WAY OF MOUNTING.

#### **NOTES**

It is important to be carefull when screw on or undo a cover. Thread surface should be free of any grains, pellets and other impurity, which cause seizing, and thread could be damaged.

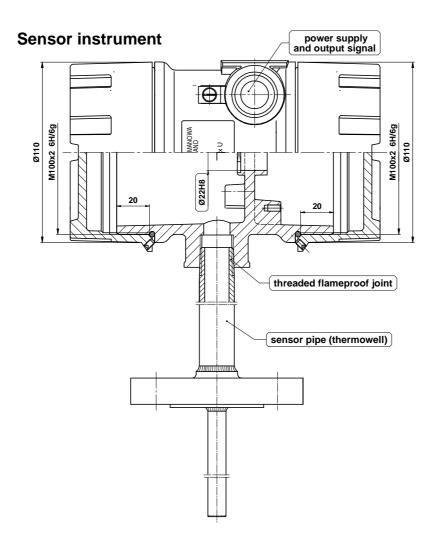

### ! Never screw on the cover forcefully!

In case of necessaries of opening of the connection head's cover after operation in maximum temperature it can be blocked (does not give to open with the hand).

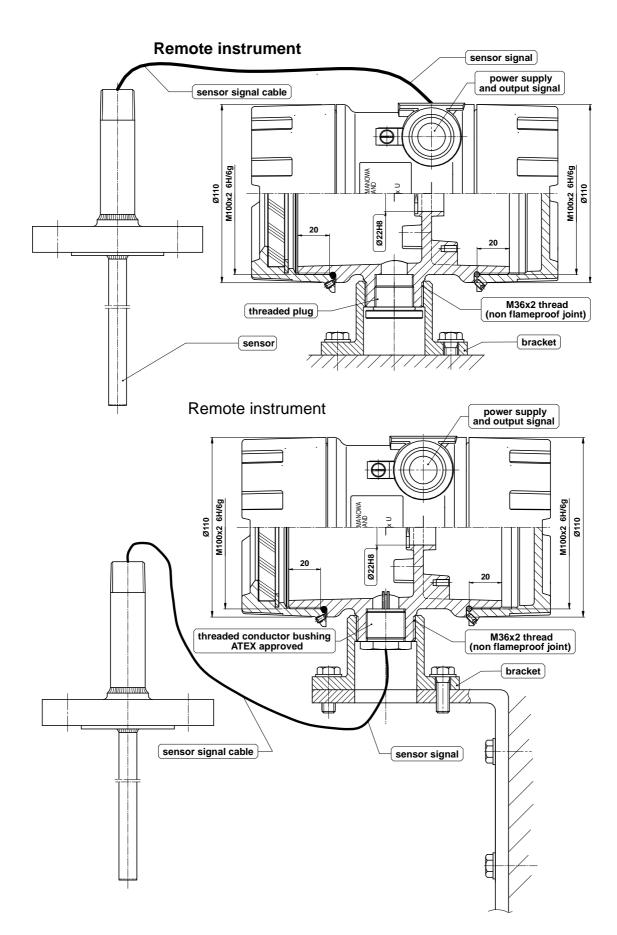

In such case keep cover tensioned with the hand to opening and hit delicate with rubber hammer into cover.

There are two ways of mounting of the housing:

- on the sensor pipe (sensor instrument)
- on the bracket screwed on the outer thread on the D<sub>1</sub> boss (remote instrument)

#### 7. MARKING
